Increasing technology in policing

What do we know
and
What has really changed?
Why this is such a core time
for technology and
partnerships?

- Against the odds, technology valuation in the UK reached 15 billion last year placing UK the third in the world
- Deep tech investment rose by 17%
- The UK tech industry is valued at more than double the next country which is Germany
- UK is producing more unicorns than ever before – last year included Cazoo, Gymshank and Octopus
- UK jobs in the digital economy have increased by 50% in the last 15 years
- Major investment is being driven by AI and quantum and advanced computing

Why does that matter and what relevance
does it have to today ?

What do we know now?

- We have faced something akin to a third industrial revolution
- Cyber breach reporting is down 46% → 39%
- More businesses have cyber insurance 32% → 43%
- Pandemic changed insurance to personal devices 23 → 72%
- User monitoring became more difficult
- Upgrades became more difficult
- Even large businesses became small in some senses

What do we know about business surveyed using technology?

- 82% have online bank accounts
- 59% have social media accounts
- 58% hold personal customer data rising to 80% in finance / health / social care
- 30% transact regularly online (57% in food hospitality)
- 1 in 5 is running older windows versions

Is the purse is empty?

Policing and private sector match

Policing

Intelligence --
Niche activity --
Secure methodology --
Measurement --
Public good ethos --
Competition --
Honed skills --
Clarity on objectives --

Private Sector

Scale
Speed
Business acumen
Business process
Connectivity
Customer demand
Commercial imperatives
Need for innovation

Cyber Alarm

A Policing Product for Business

NPCC National Cybercrime Programme

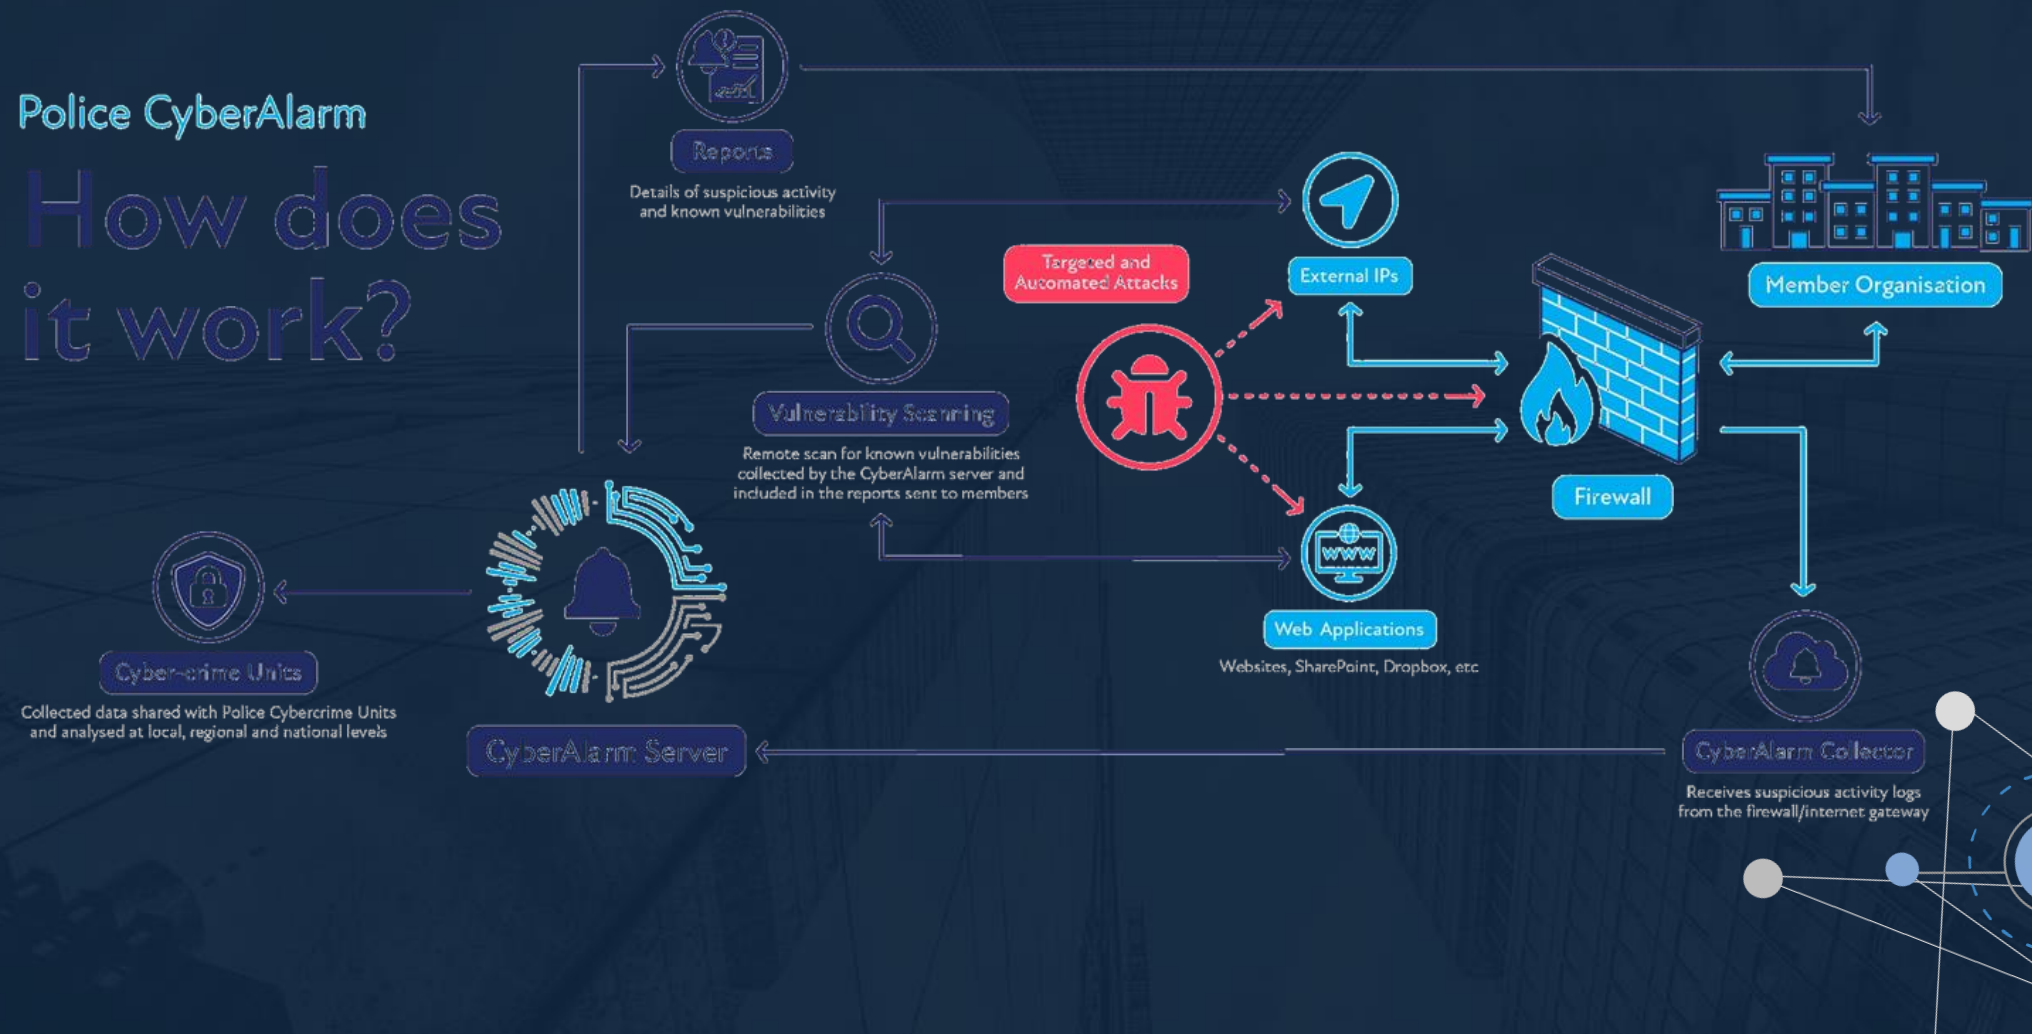

A National Scheme for...

- Small to medium sized businesses
- Organisations with a significant online presence
- Charities and voluntary organisations
- Schools
- Universities
- Any organisation that wants to support cyber policing by sharing data

Police CyberAlarm

How does it work?

Increasing technology in policing

Policing and private sector match

- ❖ Eyes on innovation
- ❖ Facial recognition
- ❖ Robotics
- ❖ Biometrics
- ❖ Body worn cameras and transfer of imaging
- ❖ Registration plate recognition
- ❖ Smart cruisers
- ❖ Artificial intelligence
- ❖ Thermal imaging
- ❖ Shots spotter technology

How technology will continue to evolve within policing?

- Potentially patrolling and virtual elements
- Evidence and preservation of evidence – courts
- Investigations
- Distributed sensing
- Cold cases
- Cross states and countries – systems and sharing

The Role of the CRC Network and National Co

- To encourage and develop partnerships
- To look at business needs
- To reinforce that joint National nexus of trust
- To innovate and develop solutions and to share best practice
- To be the first joint platform for private sector and policing
